6. Product Catalog
7. Design Queue
8. Email Log and Troubleshooting
9. Dashboard and Reporting
10. Importing Historical Orders
11. Settings and Configuration
12. How It Works
13. FAQ

1. Getting Started

Login

1. Open <https://hatafa.erptek.net> in your browser.
2. Enter your username and password.
3. Click the **Etsy** menu item in the top navigation bar.

What happens automatically

Once configured, the system checks Gmail every 10 minutes for new Etsy order notification emails with the label `ordertest2`. Each email is parsed and converted into an Odoo sale order with:

- Customer (`res.partner`) created or matched
- Product(s) created or matched
- Shop assigned (auto-created if new)
- All order details (personalisation, shipping, gift message, etc.)

No manual action is needed for day-to-day order ingestion.

2. Navigating the Etsy Menu

The top-level **Etsy** menu contains:

Menu Item	Purpose
Dashboard	Graph and pivot views of order volume and revenue by shop
Orders	All Etsy sale orders (list and form views)
Shops	Etsy shop records with order counts and revenue
Design Queue	Orders requiring design work (personalisation or gift message)
Email Log	Processing history for every email fetched
Import Orders	Wizard for bulk-importing orders from Excel

3. Viewing Orders

Order List

Navigate to **Etsy > Orders** to see all Etsy sale orders.

- Orders are filtered to show only Etsy orders (not regular Odoo orders).
- Use the search bar to find orders by Etsy Order ID, customer name, or date.

- Group by **Etsy Shop** to see orders organized by shop.

Order Form -- Etsy Tab

Click any order to open the detail form. The form has a dedicated **Etsy** tab showing:

Etsy Order:

- Etsy Order ID
- Etsy Shop
- Source Email

Shipping:

- Shipping Service
- Processing Time
- Shipping Cost

Pricing:

- Discount Code
- Etsy Subtotal

Notes:

- Note from Buyer
- Gift Message

Order Lines include Etsy-specific columns (hidden by default, use the column selector): Transaction ID, Personalisation text, Color, Size, Option.

All orders are created in **Draft** (Quotation) state. Your team manually confirms orders after reviewing them.

4. Managing Shops

Navigate to **Etsy > Shops** to view all Etsy shops.

Each shop record shows:

- **Order Count** stat button -- click to see that shop's orders
- **Total Revenue** -- sum of all order amounts
- **Orders tab** -- list of orders linked to this shop

Shops are created automatically when a new shop name appears in an Etsy email. Current shops: Viktor, Julien, Carina, Sven.

5. Customer Lookup

Finding a customer

1. Go to **Contacts** (main Odoo menu).

2. Use the **Etsy Customers** filter in the search bar.
3. Click a customer to see their details and the **Etsy Orders** smart button.

Customer deduplication

The system prevents duplicate contacts:

1. First checks by **email address** (exact match).
 2. If no email, checks by **name + ZIP code**.
 3. Only creates a new contact if no match is found.
-

6. Product Catalog

Products are auto-created from order line data. Each product has the product name, an **Is Etsy Product** flag, and an **Etsy Image URL**.

Find Etsy products via **Sales > Products** using the **Etsy Products** filter. Products are matched by exact name. Different options (size, color) are recorded as attributes on the sale order line, not as separate products.

7. Design Queue

Navigate to **Etsy > Design Queue** to see orders requiring design work. This view shows order lines where personalisation text is present or gift message is present on the parent order.

Columns displayed:

- Order reference
 - Product name
 - Personalisation text
 - Color, Size, Option
 - Gift Message
 - Image URL
-

8. Email Log and Troubleshooting

Navigate to **Etsy > Email Log** to see the processing history.

Status	Meaning
Success (green)	Email parsed and order created
Failed (red)	Email could not be parsed -- see error message

Status	Meaning
Skipped (grey)	Duplicate email -- order already exists

Investigating failures

1. Click a failed log entry.
2. Read the **Error Message** field for details.
3. Use the **Raw Body** tabs to inspect the original email content.
4. Click **Retry Parse** to attempt reprocessing.

If 5+ consecutive emails fail to parse, the system creates an Activity (warning) assigned to the admin user, alerting that Etsy may have changed their email format.

9. Dashboard and Reporting

Navigate to **Etsy > Dashboard**. The **Graph View** shows a bar chart of order revenue over time (by month). Use Group By to segment by Shop or Date. The **Pivot View** shows cross-tabulation of shops vs. months with total amounts.

10. Importing Historical Orders

1. Navigate to **Etsy > Import Orders**.
2. Click **Upload** and select your .xlsx file.
3. Click **Import Orders**.
4. The status field shows: imported count, skipped (duplicates), and errors.

The file must have 34 columns matching the original Google Sheets layout. A header row is automatically detected and skipped. Duplicate orders are skipped. Multiple rows with the same Order ID become multiple order lines on one sale order. EUR prices are parsed automatically.

11. Settings and Configuration

Navigate to **Settings** and search for **Etsy Integration**.

Setting	Description	Default
Gmail Label	Gmail label that marks Etsy order emails	ordertest2
Gmail Client ID	OAuth2 Client ID from Google Cloud Console	(required)
Gmail Client Secret	OAuth2 Client Secret	(required)
Gmail Refresh Token	Auto-filled after authorization	(auto)

Authorize Gmail starts the OAuth2 flow for first-time setup. **Test Connection** verifies credentials work. The cron interval (default: 10 minutes) is in **Settings > Technical > Scheduled Actions**.

12. How It Works

Email Processing Pipeline

```
Gmail Inbox (label:ordertest2)
| [Every 10 minutes]
Gmail API: fetch emails with label
|
Email Parser: extract 34 fields per transaction
|
Order Creator:
- Find or create customer (by email > name+zip)
- Find or create product (by name)
- Find or create shop (by name)
- Create sale.order + order lines
|
Email Log: record result (success/failed/skipped)
|
Gmail API: remove label from processed emails
```

Multi-Item Orders

When an Etsy order contains multiple items, the parser splits the "Transaction ID" blocks and creates one sale.order.line per transaction. Example:

Order #3710809073 (Shop: Sven) -- 2 lines:

Line 1: Bow And Arrow Couple Fake Tattoo (Transaction 4627028509)

Line 2: Bow And Arrow Couple Fake Tattoo (Transaction 4610631464)

Label Management

After processing, the Gmail label is automatically removed. Emails are only processed once. Re-applying the label triggers a re-fetch, but deduplication by Transaction ID prevents duplicate orders.

13. FAQ

Q: An order is missing. What do I check?

Go to **Etsy > Email Log** and look for the email. If status is "failed", read the error message. If the email is not listed, verify the Gmail label in Settings.

Q: Can I re-process a failed email?

Yes. Open the failed email log entry and click **Retry Parse**.

Q: How do I add a new Etsy shop?

Shops are created automatically when a new shop name appears in an order email. No manual setup needed.

Q: What happens if Gmail is temporarily unavailable?

The cron logs a warning and retries on the next cycle (10 minutes later). No data is lost.

Q: Can I import orders from the old Google Sheets?

Yes. Export the sheet as .xlsx and use **Etsy > Import Orders**. Duplicates are automatically skipped.

Q: Why are some prices showing as 0.00?

The price extraction depends on specific email format patterns. If the "Item price:" line is formatted differently, the regex may not match. Check the raw email body in the Email Log to diagnose.

Q: How do I stop the automatic email fetching?

Go to **Settings > Technical > Automation > Scheduled Actions**, find "Etsy: Fetch Order Emails", and uncheck **Active**.

Q: Who can access Etsy data?

All internal Odoo users can view Etsy orders, shops, and email log summaries. Only **Sales Managers** can modify shop/log records, access raw email content, or run the import wizard.
